Objective

Graduate Architecture Intern at Hillsboro or Santa Clara

Education

- **Portland State University** — Portland, OR
  M.Sc Electrical and Computer Engineering, - / 4.0 — *Fall 2021 – Spring 2023*
  - **Relevant Courses** -:
    - **ECE 581 - ASIC Modelling and Synthesis (Dr. Xaiyou Song**: Fall 2021
    - **ECE 585 - Microprocessor System Design (Mark Faust)**: Fall 2021
    - **(tentative) ECE 586 - Computer Architecture (Mark Faust)**: Winter 2022
    - **(tentative) ECE 587 - Advanced CompArch I (Yuchen Huang)**: Spring 2022
    - **(tentative) ECE 588 - Advanced CompArch II (Yuchen Huang)**: Fall 2022
- **College of Engineering, Pune** — Pune, Maharashtra, India
  B.Tech Electronics and Telecommunication Engineering, 3.2 / 4.0 (7.99/10) — *May 2015 – June 2019*

Experience

- **Tejas Networks** — Mumbai, Maharashtra, India
  Research and Development Engineer — *August 2019 - August 2021*
  - **Networking Technologies**: Continuously working with DHCP, VLAN tagged Traffic management, VPNs, Downstream Ingress Bandwidth, HQOS queuing, Traffic Shaping Profiles, etc.
  - **C/C++**: The software used for configuring switching capabilities of a network card is largely C for device drivers and C++ for higher level UI.
  - **Feature Development**: Implemented Zero Touch In-Band Management feature request by Tejas Network's client in collaboration with QA team.
  - **Python**: Extensive scripting to trivialize monotonous commands with flexibility to adapt to situations.
  - **Training**: Trained new recruits to the team and enable them to contribute meaningfully.
  - **SQL**: Configuration stored on the network cards is in a database, needs to be created , updated, or re-played onto the hardware are required.
- **DOT Sys Technologies** — Mumbai, Maharashtra, India
  Design Intern — *May 2018 - August 2018*
  - **Transistor Theory**: Implemented Pulse Width Modulation to control voltage and current levels to make a within constrains of Transistor hardware.
  - **Power Electronics**: Used loose capacitors, inductions and Transformers to convert main lines supply to transistor switching compatible levels.
  - **Arduino**: Made a Programmable Battery Charger with UI implemented on Arduino + Transistor Theory and Power Electronics.
- **Eduvance** — Mumabai, Maharashtra, India
  Intern (part-time to full-time) — *May 2017 - January 2020*
  - **IoT**: Used RPi to collect data from devices via Bluetooth and IBM cloud services to implement data storage, sync, and decision making on cloud
  - **Bluetooth**: Used Cypress Semiconductors PSOC4-BLE boards as portable markers to be attached to files to track them and provide information to RPi for syncing.

Projects

- **hamming_code**: Asynchronous Hamming Encoder and Decoder in System Verilog.
- **fifo**: Parameterized fifo with no handshaking protocols for outgoing communication.
- **i2c**: I2C master and slave implemented in Verilog, currently re-writing code in to System Verilog.
- **ffind**: Small wrapper for find command in linux to make find accept grep-like arguments.
- **Music-Player-GO**: Feature Contributions to open source Music Player app.

Personal publications

- **Modified MD5 Algorithm for Low-End IoT Edge Devices. Viraj Khatri, Dr. Vanita Agarwal. ICCCNT2019**:
